  - Other Bright Spots Across the Country
3. Recommendations (My Top 6 List)
4. Where Do We Go from Here?

# The Three-Part Aim

## Better healthcare

Improving patients' experience of care within the Institute of Medicine's 6 domains of quality: *Safety, Effectiveness, Patient-Centeredness, Timeliness, Efficiency, and Equity.*

## Better health

Keeping patients well so they can do what they want to do. Increasing the overall health of populations including addressing behavioral risk factors and focusing on preventive care.

## Reduced costs

Lowering or controlling the cost of care per capita

Health Information Technology as a Foundation  
for New Payment and Delivery Models

# The HITECH Story – What, Why, and How?

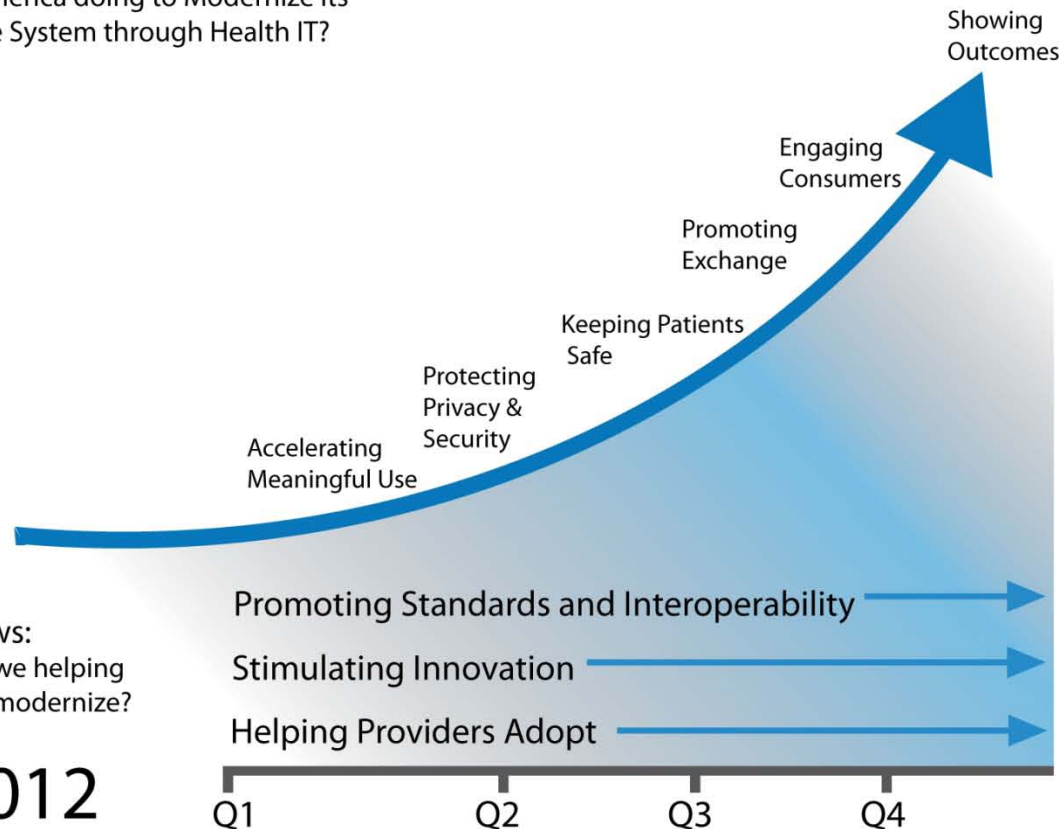

## The What:

### Telling the HITECH Story

What is America doing to Modernize its Healthcare System through Health IT?

The Hows:  
How are we helping  
America modernize?

2012

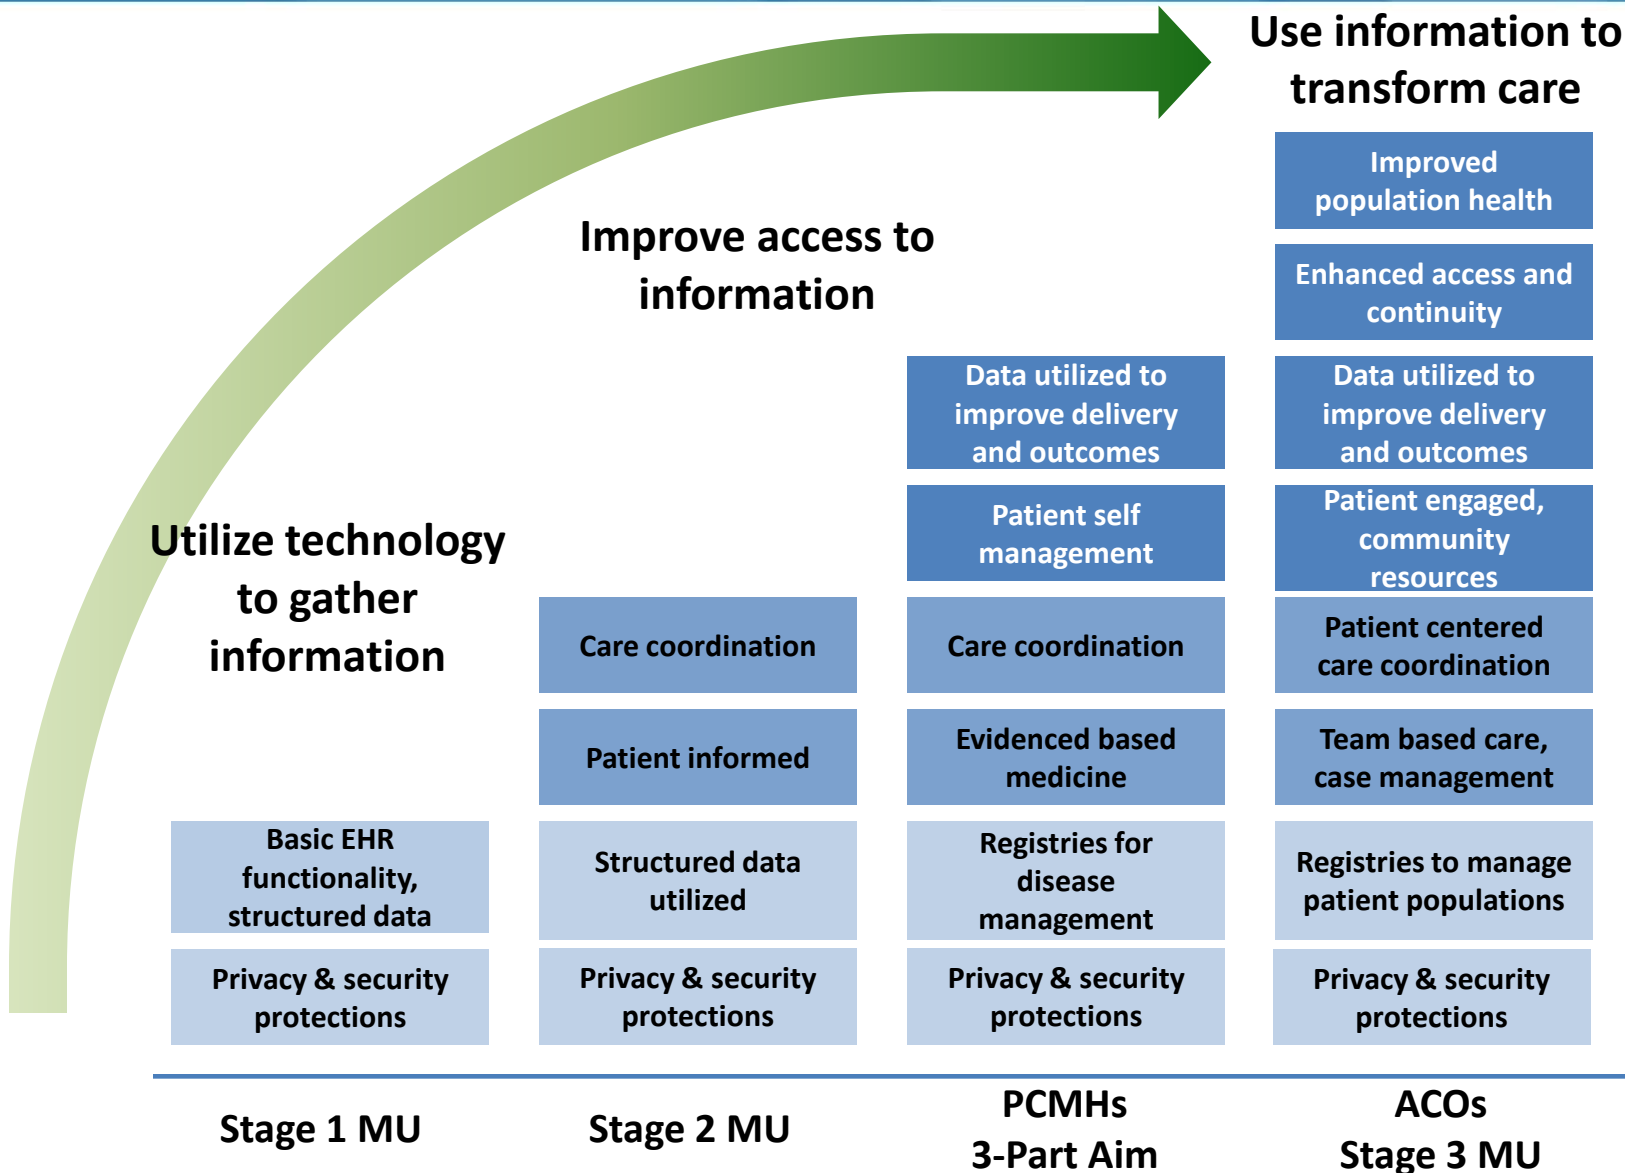

The Whys:

Why does America need to modernize using Health IT?

Health IT is.....

- Here to stay, accelerating, and patients expect it.
- Enabling providers to securely and efficiently exchange patient health information.
- Giving providers the right information, at the right time to offer their patients the right care.
- Giving consumers tools to know their health information so that they can improve their health.
- Foundational to building a truly 21st century health system where we pay for the right care, not just more care.

# Meaningful Use: A Building Block

- Physician adoption of any EHR system has more than tripled since 2002, going from 17 percent to 57 percent in 2011 (NCHS Data Brief).
- The adoption of basic EHRs has doubled since 2008, going from 17% to 34% in 2011 (NCHS Data Brief).
- The share of hospitals using EHRs has more than doubled from 16% to 35%.

# Meaningful Use – All Payments

All Eligible Providers and Hospitals Receiving Payments Under the Medicare or Medicaid EHR Incentive Programs

# From The Office Of The National Coordinator: The Strategy For Advancing The Exchange Of Health Information

**ABSTRACT** Electronic health information exchange addresses a critical need in the US health care system to have information follow patients to support patient care. Today little information is shared electronically, leaving doctors without the information they need to provide the best care. With payment reforms providing a strong business driver, the demand for health information exchange is poised to grow. The Office of the National Coordinator for Health Information Technology, Department of Health and Human Services, has led the process of establishing the essential building blocks that will support health information exchange. Over the coming year, this office will develop additional policies and standards that will make information exchange easier and cheaper and facilitate its use on a broader scale.

- Little exchange occurring
- Cost of exchange high, time to develop is long
- Poised to grow rapidly, spurred by new payment approaches
- Many approaches and models

## Receipt of Discharge Information by PCPs

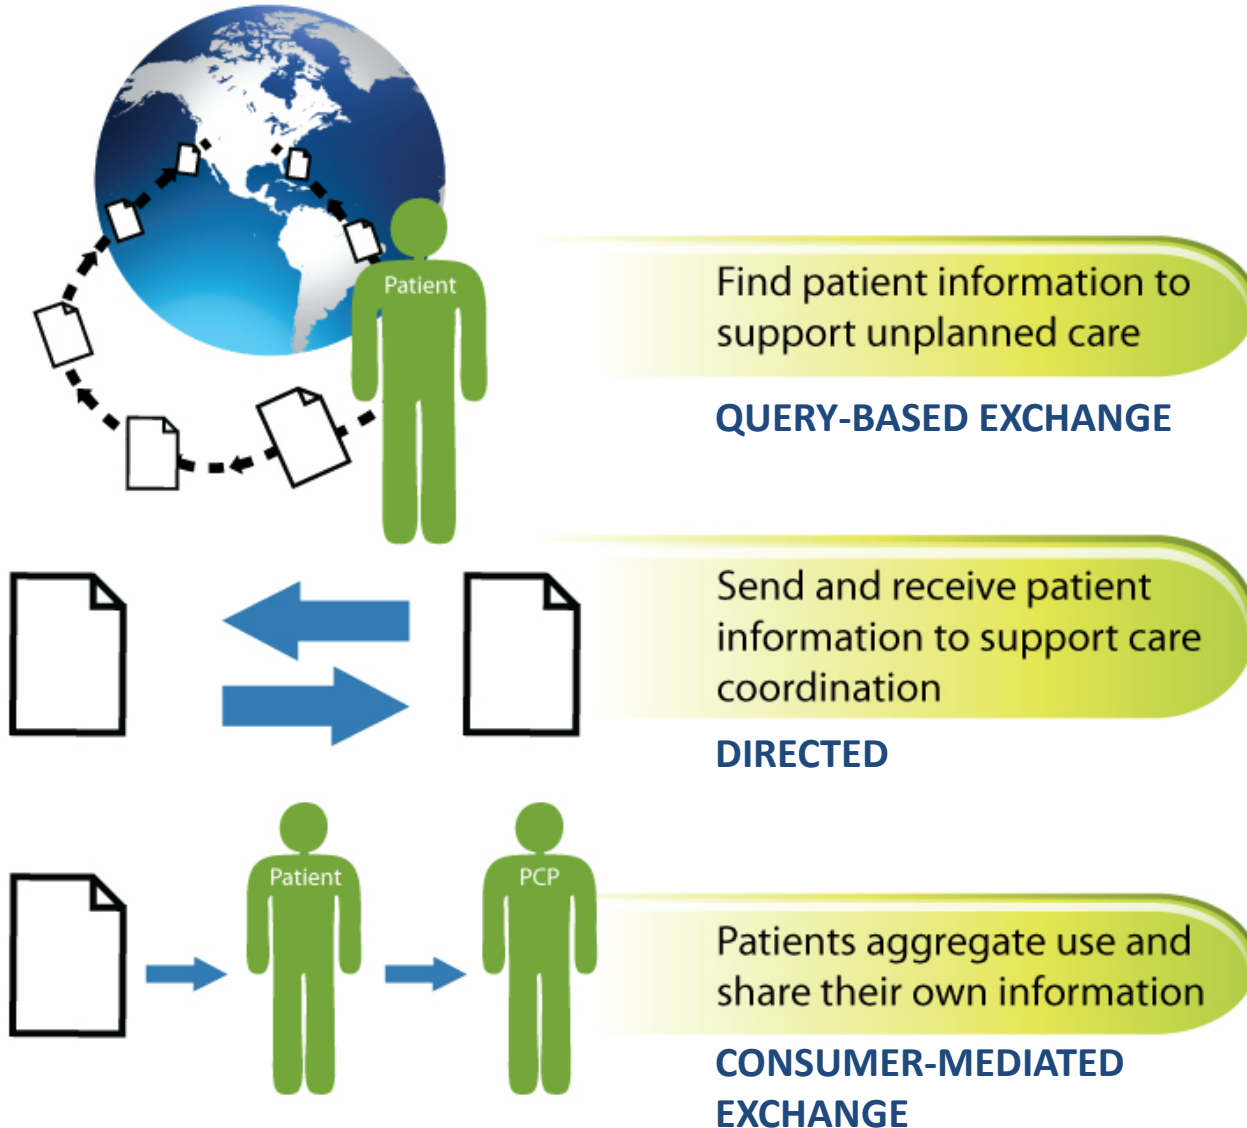

\*Respondents could select multiple responses. Base excludes those who do not receive report. Source: 2009 Commonwealth Fund International Health Policy Survey of Primary Care Physicians.

# Will We Soon See this Curve? For Care Summary Exchange? For Lab Exchange?

## Number of e-Prescribers in US by Method of Prescribing

# ONC's Goal - Information Securely Follows Patients Whenever and Wherever They Seek Care

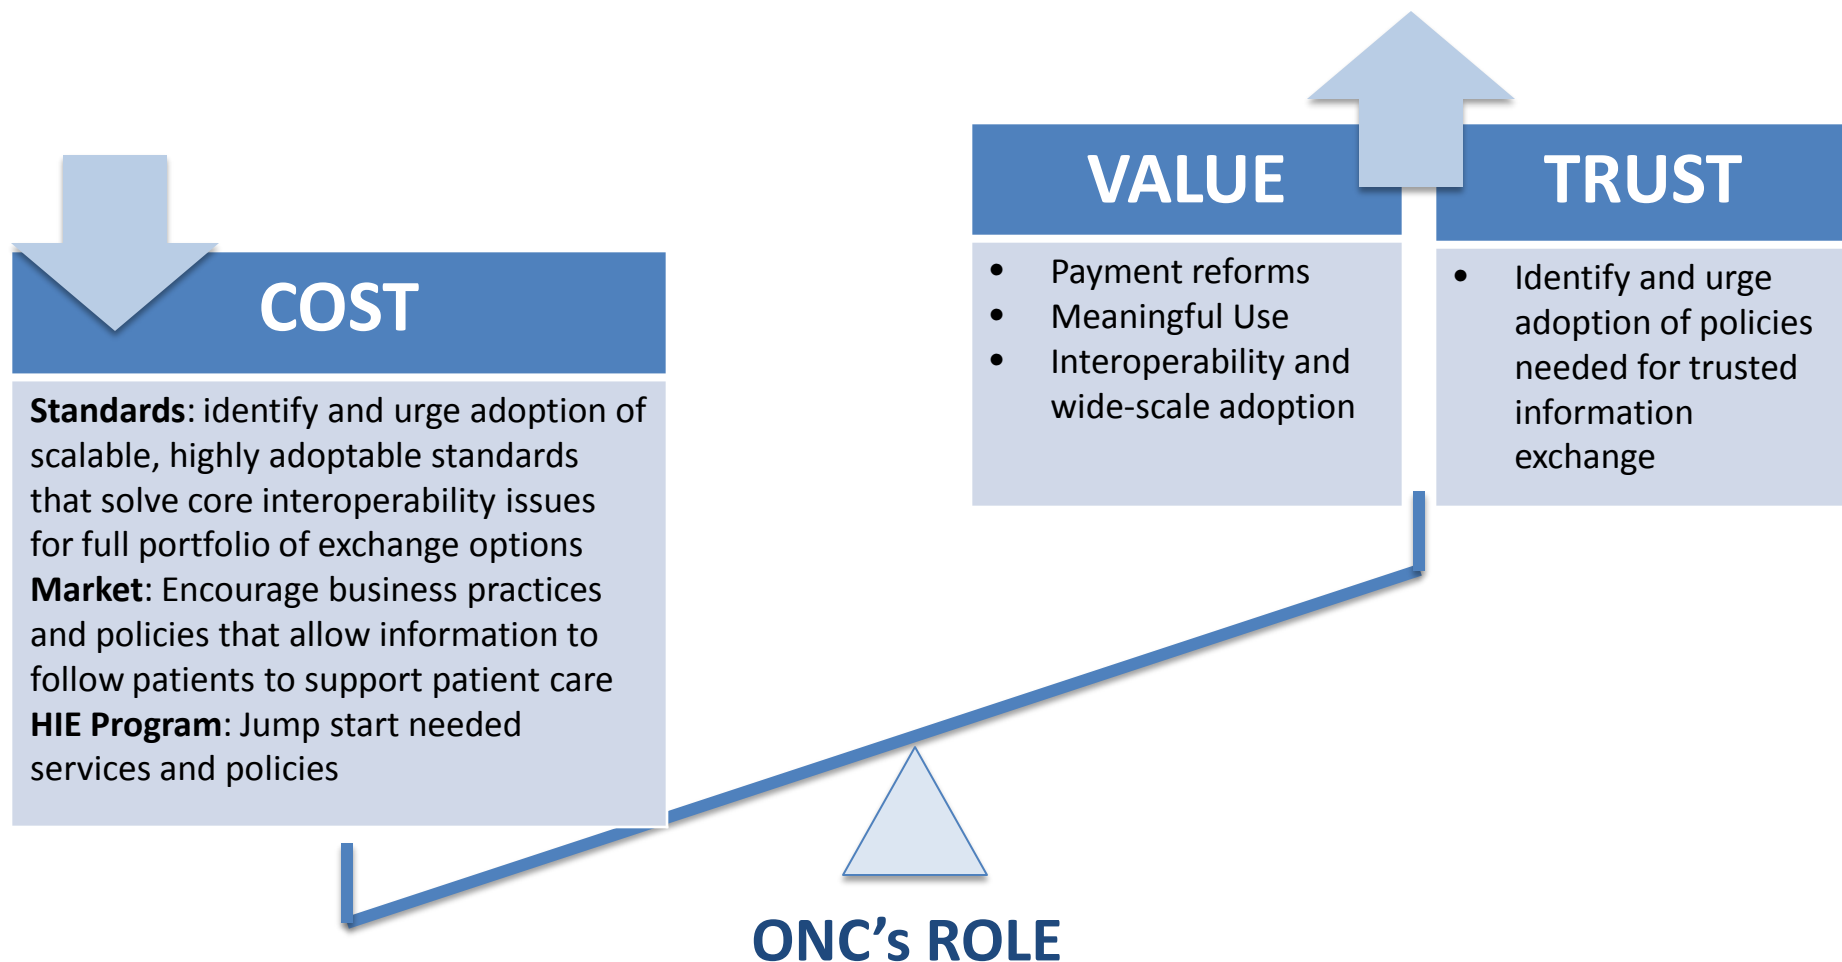

## MULTIPLE MODELS

- Interoperability is a *journey*, not a destination
- Leverage *government as a platform* for innovation to create conditions of interoperability
- Health information exchange is *not one-size-fits-all*
- Multiple approaches will exist *side-by-side*
- Build in *incremental steps* – “don’t let the perfect be the enemy of the good”

# ONC's Role - Reduce Cost and Increase Trust and Value To Mobilize Exchange

# Exchange Priorities in 2012 - Driving Forward on Multiple Fronts

- More rigorous exchange requirements in Stage 2 to support better care coordination
- Standards building blocks are in place, with clear priorities to address missing pieces in 2012
- NwHIN Governance increases trust and reduces the need for one-to-one negotiations among exchange organizations
- State HIE Program jump starts needed services and policies

# ONC's Beacon Community Program: Where HITECH Comes to Life

Putting the I in HealthIT   
www.HealthIT.gov

**17 communities each funded ~\$12-15M over 3 yrs to:**

**Build and strengthen** health IT infrastructure and exchange capabilities - *positioning each community to pursue a new level of sustainable health care quality and efficiency over the coming years.*

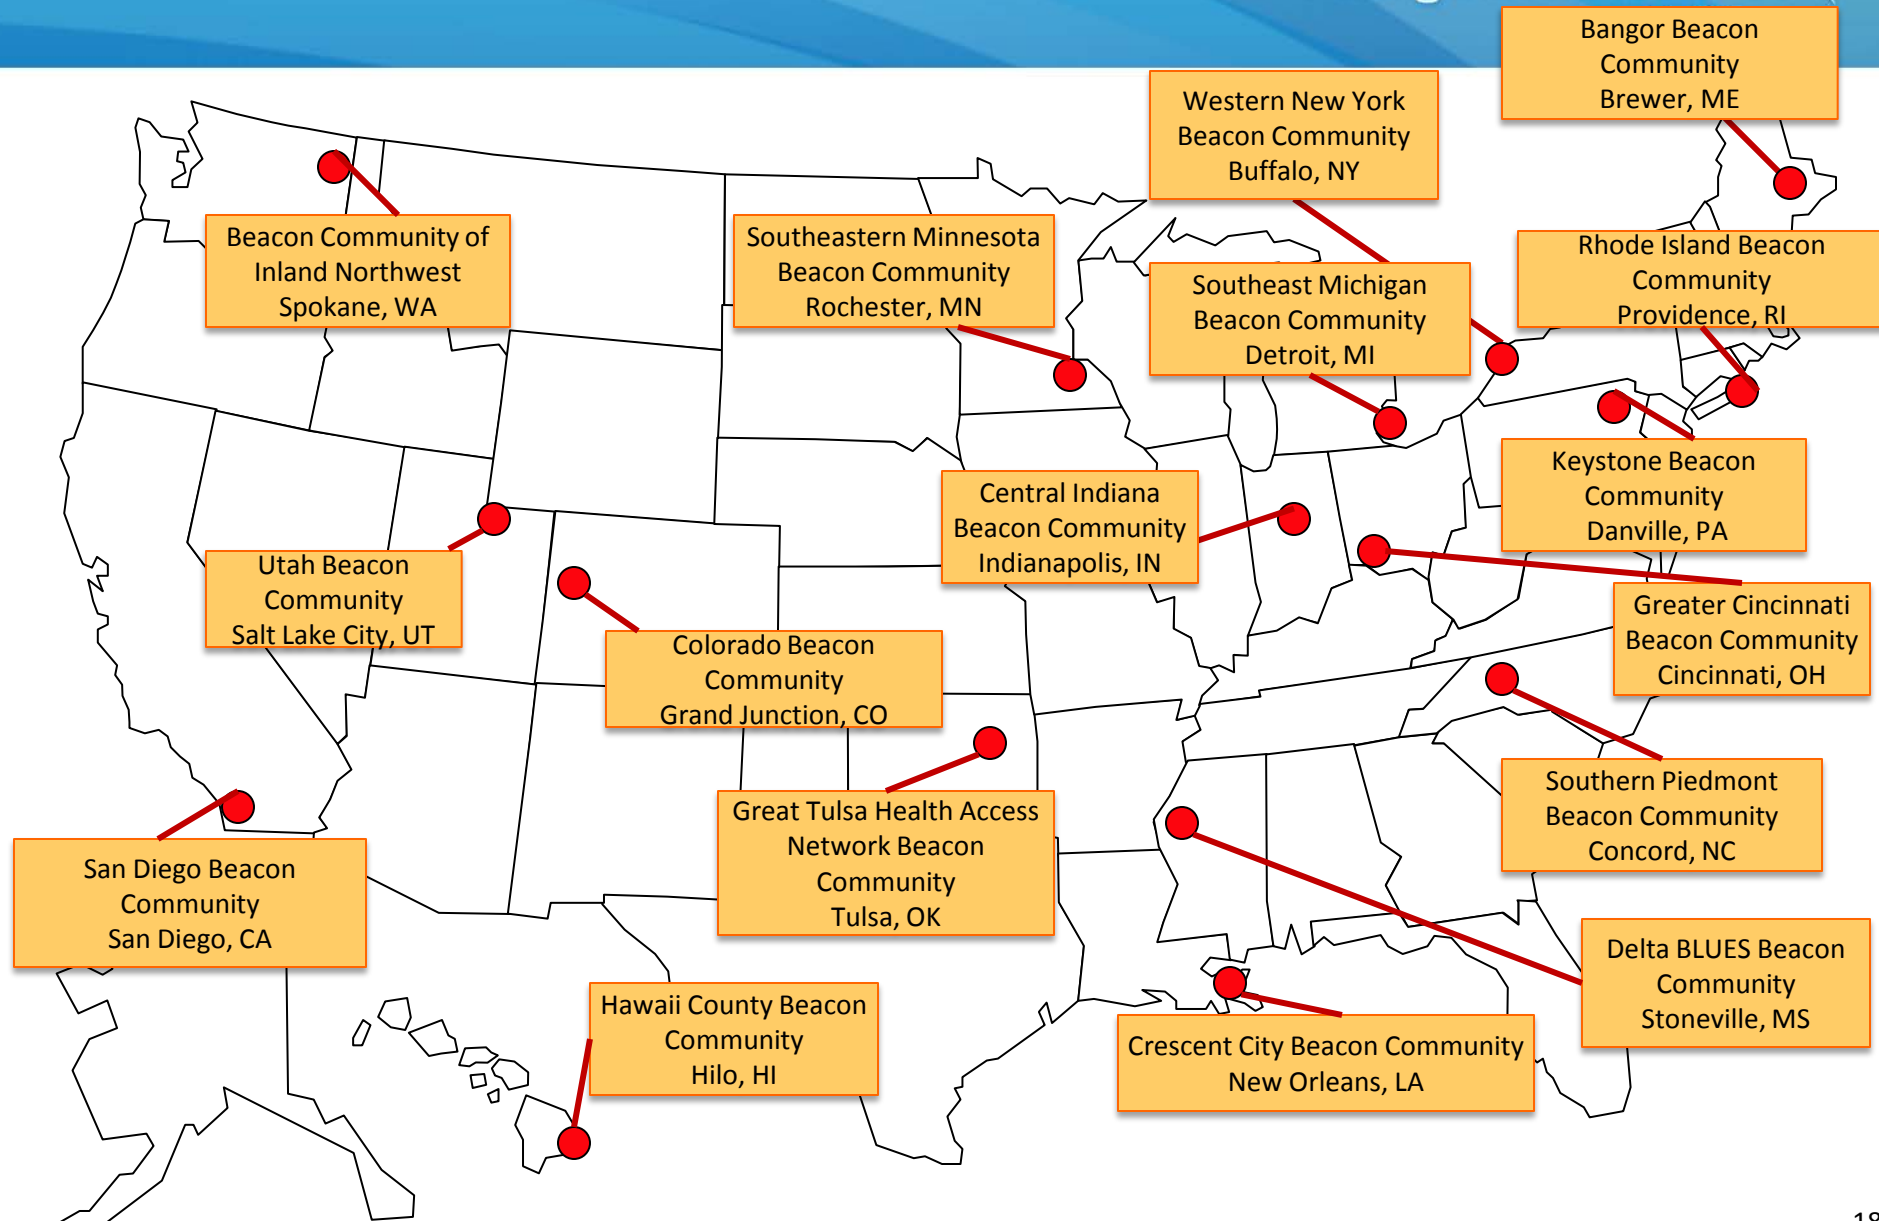

**Improve** cost, quality, and population health - *translating investments in health IT in the short run to measureable improvements in the 3-part aim.*

**Test innovative approaches** to performance measurement, technology integration, and care delivery - *accelerating evidence generation for new approaches.*

3. Recommendations – My Top 6 List
4. Where Do We Go from Here?

# What's the Secret to Success?

"I think you should be more explicit here in step two."

# 1. Set the goal, let the organizations and technology follow

**“We’ve learned that that’s an incredible gift, to have very specific goals, not for a hospital or for a clinic, but for an entire community.”**

**Farzad  
Mostashari,  
The National Coordinator**

**“Focus on the areas of overwhelming support, not the coolest technologies. Although there are many ideas regarding the use and types of data that can be transmitted using the health information exchange, not every suggestion had communitywide impact or merit.”**

**The bottom line: What’s the big, hairy audacious goal? Who supports it today? What technology is needed to succeed?**

## 2. Unite the tribes of health system improvement

**American Journal of Managed Care  
2010, Aaron McKethan PhD and Craig  
Brammer**

**“Nested within a growing national consensus that the performance of the US healthcare system needs to be improved are largely distinct “tribes” of experts with varying interpretations of what would constitute improvement: the quality improvement tribe, the payment reform tribe, the consumer engagement tribe, and the HIT tribe.”**

**How are the Nuer people in southern Sudan like tribes of experts in health care?**

- “At any given time, individuals are members of several groups in a hierarchy, from the local or proximal (eg, my street, my neighborhood) to larger groups (eg, my region, my country)
- The most meaningful group affiliation at any given time depends on the scale and nature of external threats or conflicts. For example, wars or other national crises encourage individuals to consider themselves as part of a nation; absent common threats, individuals may more strongly identify with groups or tribes lower in the hierarchy (eg, political parties).”

**The bottom line: Bring the “tribe” of LTSS/community-based organizations together with the others FROM THE BEGINNING. Don’t be afraid to engage non-traditional partners like employers and health plans. They are critical to your success.**

### 3. Align community initiatives and find a trusted convener

*“The community at large has multiple agendas, projects and competing goals. Having an understanding of what the other community projects are, how they impact your project and where there is competition for scarce resources, how you can align with other projects to achieve synergy and avoid competition, is vital.”*

Western New York Beacon Community

**The bottom line: Figure out how your program and organization fit into the crowded map of local activities. Identify who is best equipped to convene multi-stakeholder meetings.**

# 4. Commit to putting information in the hands of patients, clients and care givers

- 46% of American Adults have a smart phone of some kind
- 2 out of 5 cell phone users owns a smart phone
- 53% of American adults age 65 or older use the internet or email
- Between April 2009 and May 2010, social networking use among internet users age 50-64 grew by 88% (25% to 47%). Users 65 and older grew 100% (13% to 26%)

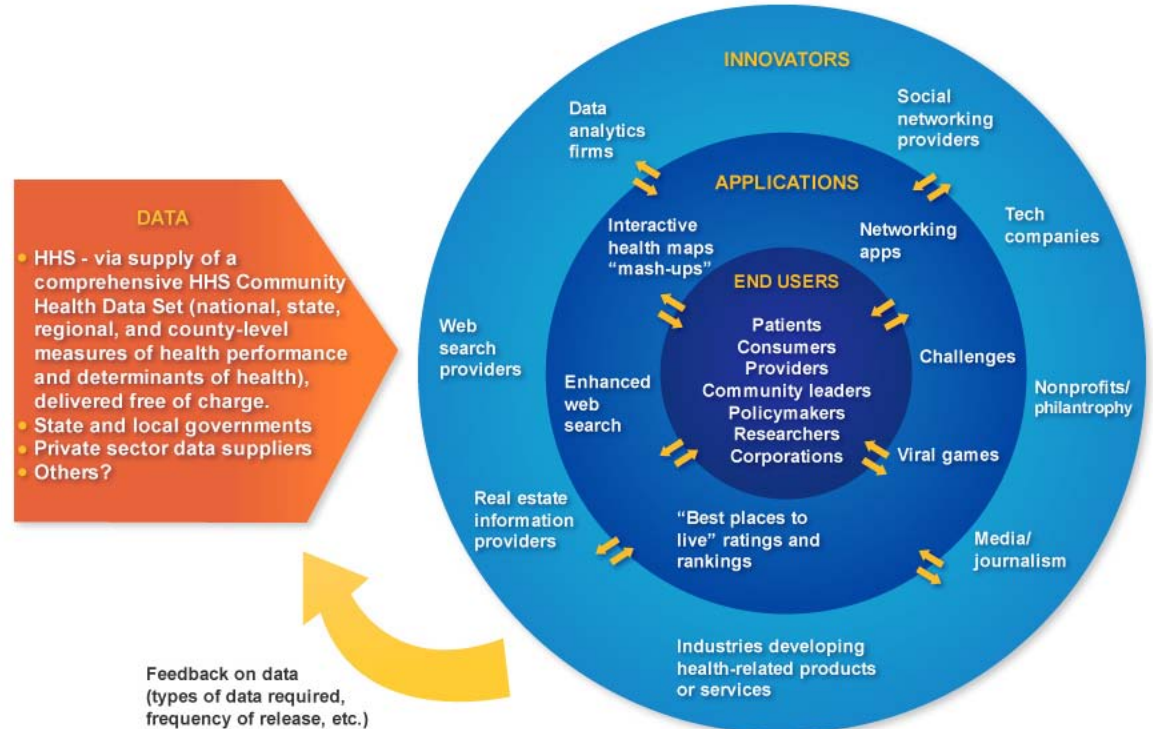

**The bottom line: People are increasingly going to want access to their/their families' information. Mobile phones will likely become the "on-line portal" for many. How are you taking advantage of this dynamic?**

# 5. Embrace Big Data

**“Volume, Velocity and Variety: What Need to Know about Big Data”**  
Edd Dumbill, Forbes Magazine

**“Big Data Challenges Persist in Public Health”**  
Dan Bowman, Government Health IT

**The bottom line: Modernizing your systems (independent of exchange and interoperability) is valuable to you and your care partners.**

# 6. Pursue Innovation in Wellness and Health

DEPARTMENT OF HEALTH AND MENTAL HYGIENE
